

CLAIMS:

5 What is claimed is:

1. A connector comprising:

an electrically conductive member having a longitudinal section and a transverse section, at least a portion of said longitudinal section providing a cylindrical hollow end and
10 said transverse section having four protruding legs for engagement with circuit traces on a printed circuit board;

an electrically conductive pin positioned with respect to said electrically conductive member, a first part of said electrically conductive pin being substantially centrally located within said hollow end and a second part of said electrically conductive pin extending
15 transversely and substantially parallel to said four legs; and

a single-piece electrically insulating body surrounding said electrically conductive member and said electrically conductive pin.

2. The connector of Claim 1 wherein said connector is a right-angle connector.

20

3. The connector of Claim 1 wherein said second part of said conductive pin extends beyond a surface of said electrically insulating body.
